

NEW PRODUCT RELEASE

1st September 2025

Introducing the Improved PolySlab® Medium Base from RectorSeal Australia

RectorSeal Australia is proud to announce the release of the **new and improved PolySlab® Medium Base**, engineered to deliver enhanced performance, easier installation, and improved handling—while maintaining the strength and reliability that the HVAC industry has come to expect from PolySlab.

Through advanced material optimisation and design refinement, the updated PolySlab Medium Base is now **0.5 kg lighter**, offering easier transport and installation on-site. Importantly, this reduction in weight **does not compromise strength, durability, or load-bearing capacity**. The PolySlab Medium Base continues to meet the same performance standards required for supporting HVAC unitary equipment.

Key Improvements Include:

- **Enhanced Stackability:** Redesigned contours allow for more stable and efficient stacking, reducing storage space and simplifying logistics.
- **Improved Fastening System:** Updated fastening points make securing equipment faster and more user-friendly for technicians.
- **Optimised Structural Design:** Engineering upgrades ensure the slab retains its proven strength and integrity despite a lighter material profile.

These enhancements make the new PolySlab Medium Base more practical and efficient for installers while preserving the durability and trust associated with the PolySlab brand.

RectorSeal Australia remains committed to continuous innovation, product improvement, and providing high-quality solutions that make the job easier for HVAC professionals.
